Projects

Customer Churn Prediction System | *Python, Flask, scikit-learn, HTML, CSS* GitHub | Live

- Trained a classification model on 7,000+ telecom records achieving 85%+ accuracy in predicting customer churn using scikit-learn and Flask.
- Reduced customer retention planning time by 30% via an automated recommendation engine and prediction history dashboard.

Resume Screening System | *Python, Flask, scikit-learn, HTML, CSS* GitHub | Live

- Built an NLP-based resume ranking engine using TF-IDF scoring to match resumes against job descriptions, processing 100+ resumes in under 10 seconds.
- Automated skill extraction and filtering, reducing manual screening time by 60% across 20+ job categories.

University Management System | *HTML, CSS, Bootstrap, jQuery, PHP, MySQL* GitHub | Live

- Built a web-based system managing fees, attendance, and test records for 500+ students across 3 core modules using PHP, MySQL, and Bootstrap.
- Reduced manual data handling by 40% through optimized SQL queries and a responsive UI.

Achievements

- Competed in Innovation Hackathon – ICI FEST 2025, developing a working prototype within a 24-hour sprint.
- Completed Deloitte's Data Analytics Job Simulation, applying data analysis and business insight reporting skills.
